

# BLUETOOTH AUDIO TRANSMITTER

Mid Continent Controls is excited to introduce our Bluetooth Audio Transmitter. The device will allow owner/operators to have the ability to pair wireless Bluetooth headset at the cabin seats. Once the transmitter is installed, simply pair your personal headset and you're able to stream cabin audio.

The Bluetooth Audio Transmitter is installed behind the cabin finish and is connected to aircraft DC power and line level audio inputs from the cabin audio system. The transmitter also provides pass-through to a traditional audio jack for additional installation flexibility. A Bluetooth antenna is integrated into the module for easy installation. Pairing mode can be activated via a CMS system or multiple switch options that are available from Mid Continent Controls. Multiple transmitters can be mounted within the cabin allowing for each seat to have the added Bluetooth functionality.

- Simple and easy pairing function
- Seamless integration
- Lightweight design
- FAA TSO C139a Certification
- MC2 QuickTurn part

## SPECIFICATIONS

Part Number.....	102047-1
Case Dimension.....	1.63" x 0.50" x 3.48"
Weight (NTE).....	10oz (NTE)
DC Power Input .....	28VDC, 150ma(Max)
Audio Input.....	Line level
Pairing.....	Momentary Ground
Certification.....	TSO C139a
